## Introduction

Since the 1st Announcement of GeoShanghai International Conference 2018 was released, we have received strong support from international geotechnical communities. More than 600 full papers from over 30 countries have been received. In total 541 technical papers have been accepted based on peer reviews and will be published in eight volumes of the conference proceedings by Springer.

Shanghai is a unique cosmopolitan city where traditional Chinese culture has been blended seamlessly into those from all over the world. Over the last four decades, Shanghai has experienced great expansion in infrastructure construction, resulting in hundreds of showcase projects representing high-level designs and theories in geotechnical engineering. The geotechnical and underground engineering in Shanghai currently is still under rapid development. The organizers are pleased to invite you to attend the Geoshanghai 2018 conference.
